SERVICE CENTER

OPERATED BY LUBE PIT STOP, INC.

Air Filter / Cabin Air Filter

Most vehicles have two important filters, and both need to be replaced regularly to keep you and your vehicle healthy. Most manufacturers recommend replacement once a year or 20k—25k miles. Inspection of both of these filters is included in our Full Service Package (if accessible) so let the experts at the Xpress Lube Service Center locations do the dirty work for you.

Engine Air Filter Replacement

As your car or truck draws air into the engine, particles like dust, dirt and insects are caught by the car air filter. Replacing the air filter with a high-quality filter regularly helps:

- Ensure air flows cleanly and smoothly to the engine,
- Helps to maximize and maintain performance
- Ensure peak fuel mileage

Cabin Air Filter Replacement

Many vehicles now include a cabin air filter that removes dirt, dust and other particles like pollen from your climate control system. Replacing the cabin air filter regularly when it's clogged helps

- Improve the quality of air you breathe inside your car or truck by blocking 99.5% of the pollutants entering your vehicle
- Helps keep the cabin dust and pollen levels at a minimum
- Maintains the integrity of your vehicle's heating and air conditioning system
