Cooling System Service

\$119.95 *plus tax and disposal

Periodically checking the condition and strength of your coolant minimizes the risk of cooling system freezing or boiling over. Flushing the cooling system removes sediment and scale. This keeps corrosion out, so it can't cause radiator, heater core leaks, thermostat problems, overheating and premature water pump failure. Many manufacturers recommend removing at least 90% of the old coolant before refilling the system. A traditional "Drain and Fill" service would require three to four consecutive cycles to get close to a 90% removal. We offer our service using a specialized and industry approved flushing machine, which operates at your vehicles normal operating temperatures and pressures.

Service Includes...

- Cooling System Cleaner is installed
- Radiator, Engine, and Heater Core are flushed
- Hoses are checked
- Entire engine and cooling system is refilled with Extended-Life Coolant
- Install Cooling System Conditioner
